# Agenda

- Utility Drivers
- AMI Overview & Benefits
- Q&A

- **Resource management**
  - Peak power reduction
  - Conservation
- **Infrastructure management**
  - Extending the life of existing infrastructure assets
  - Enhanced targeted maintenance activities
  - Improved prioritization of investments
- **Customer Engagement**
  - Access to timely and reliable usage information to consumers
  - Education through information

# CUSTOMER ENGAGEMENT

Emerging demand for customer interaction

*Why is my bill so high?*

*Why didn't you tell me that I had a problem before my bill went up?*

**WHAT CAN I DO TO SAVE ELECTRICITY?**

*I don't understand my bill*

*Can you show what I consume?*

**How can I reduce my carbon footprint?**

- **Acceptance, and expectation of higher utility interaction demand new engagement strategies**
  - Customers want to know what *IS* happening and not what *DID* happen
- **To support efforts to be Green, need more timely information:**
  - Reducing electricity reduces carbon footprint
  - Regulators at state and national levels are demanding that utility initiatives support social imperatives

# WHAT TYPE OF INFORMATION ARE USERS INTERESTED IN?

- **Graphs which reflect a home's monthly electricity usage**
  - Identifies long term trends
- **Tools that provide estimated savings for different electricity-reduction initiatives**
  - Identify options and costs
- **Comparison of use versus neighborhood average**
  - Desire for peer usage comparison
  - Spurs efficiency in electricity

# AMI Overview

# EVOLUTION OF METERING

Metering technology capability has evolved over time:

- **Manual:** Mechanical accumulation meters, manually read, single consumption per meter read
- **AMR:** Mechanical accumulation meters, drive-by or remote meter reading, single consumption per meter read
- **AMI:** Pulse or time interval based consumption measurement, drive-by or remote meter reading, multiple consumption values within a day's consumption
- **AMI:** Addition of 2-way communication capability

# AMI (SMART METERING) IS ...

- **A program comprised of integrated solutions**
  - A platform for metering and non-metering information
  - A foundation for other initiatives
  - A Focus on high customer engagement
- **Capable of providing**
  - An underlying two way communications network
  - Interval data – 15 minute, hourly, etc.
  - Quality of Service information
  - Information management solutions
- **Attributes**
  - A connection to the consumer
  - Massive amounts of data
  - Dependence on communications networks to facilitate interconnection of smart devices and systems

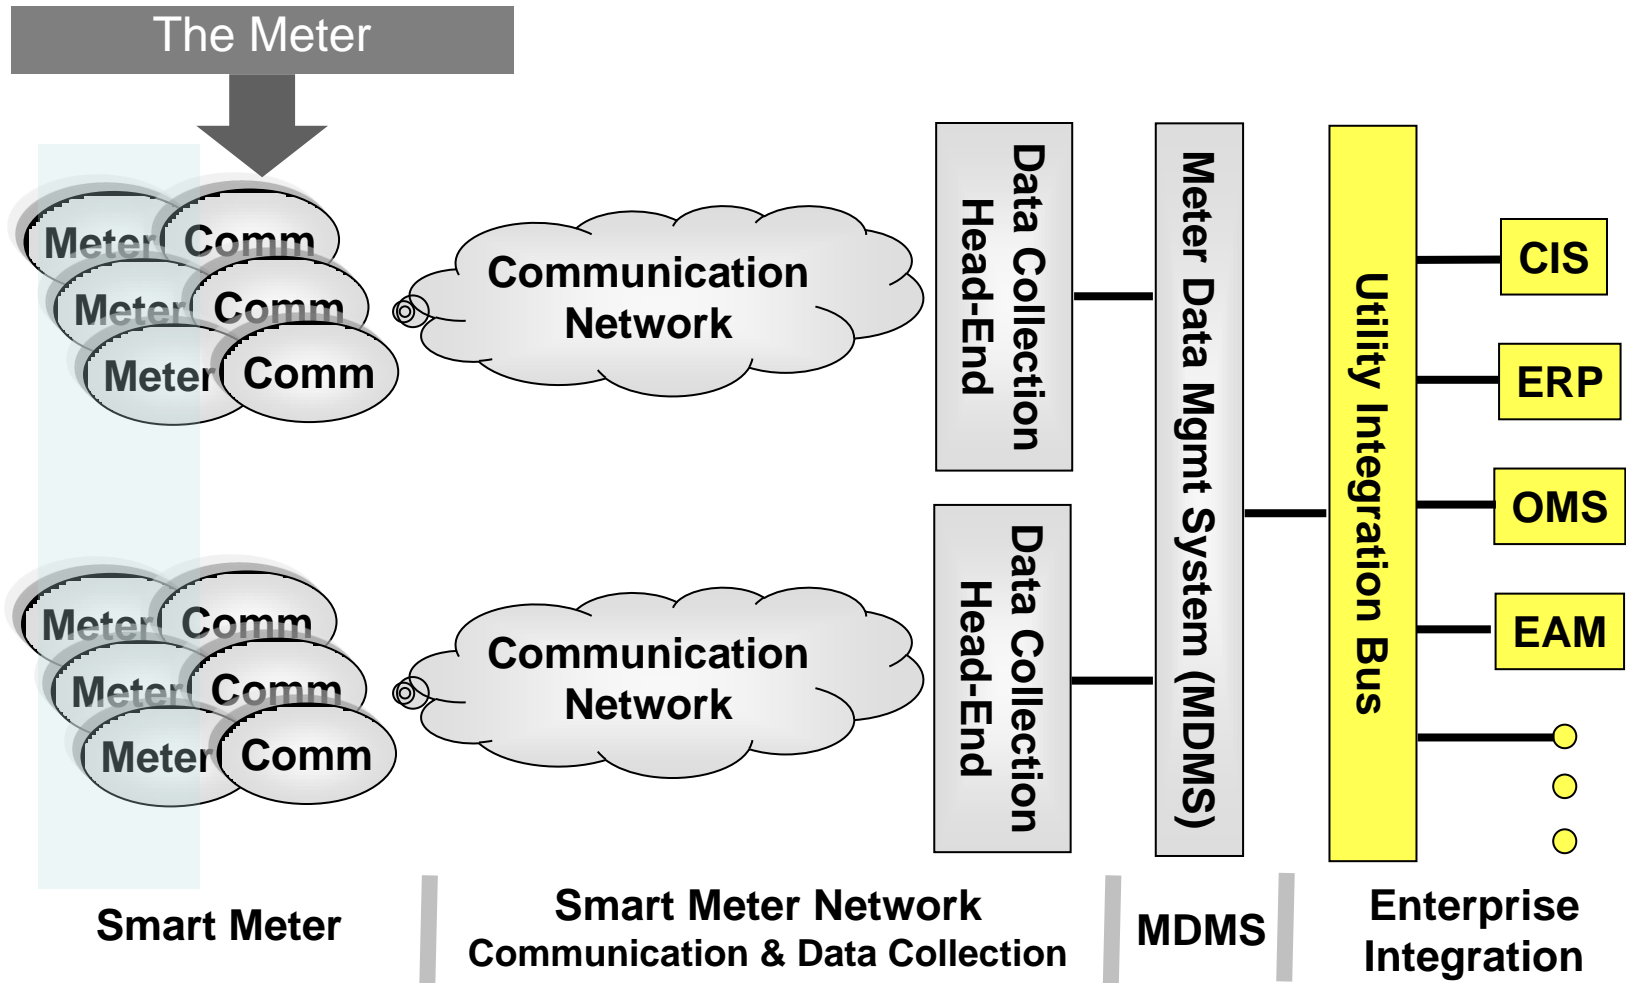

# WHAT IS AMR

- **A pure meter reading system**
  - Data comes back as frequently as you roll a truck
  - A Focus on basic meter reading
- **Capable of providing**
  - Monthly meter reads
- **Attributes**
  - No communications network
  - 1 way communication from meters
  - Low amount of data
- **Cost**
  - Used to be much cheaper than AMI, cost difference has come down immensely → harder to make a cost savings argument

# SMART METER SOLUTION

# Smart Meters

It isn't just about the meter! They are important, but.....

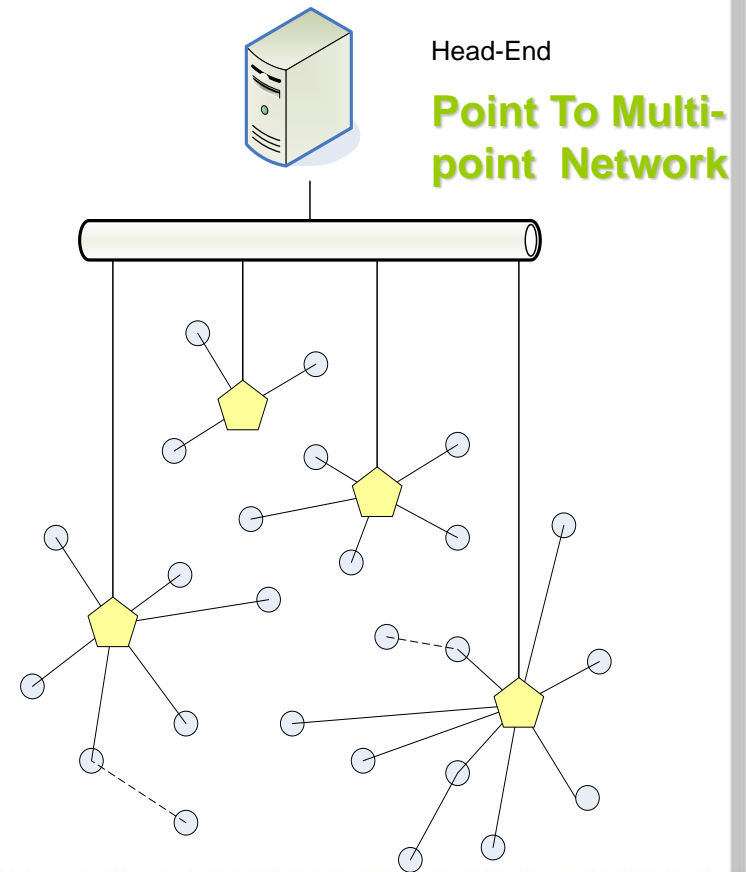

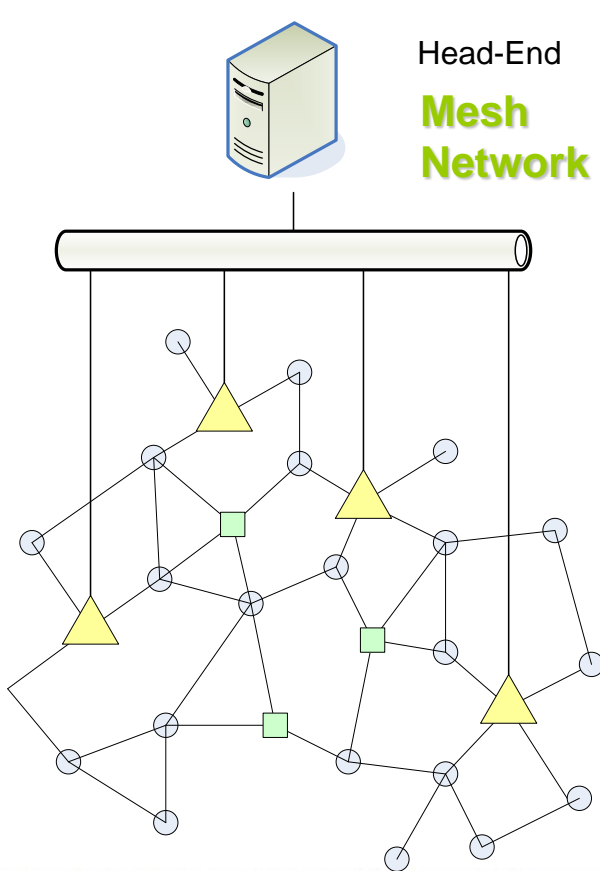

It is about the network and software!

# COMMUNICATIONS NETWORK

Two leading types of smart meter communications architectures in use across all commodities:

# Multi-Path Network for Reliability

- Data "hops" from meter to meter to extend range and alternate paths
- *Controlled* Multi-Path network
  - Collector sets up the local network
  - Any meter can be a repeater
  - Algorithms emphasize path
  - Reliability to each meter, during and after registration

# AMI OPERATIONAL EFFICIENCY BENEFITS

## Meter Reading

- Reduced meter reading costs
- Better read accuracy
- Exception reporting
- Asset management
- Automated move in/out (turn-on/off)
- Alerts and messaging

## Revenue Management

- Identification of electricity theft
- Reduced billing adjustments
- Improved credit and collections
- Time of Use (TOU) rates

## Planning

- Capital and O & M expenditure budgeting

## Cost & Loss Management

- Reduced employee accidents
- Demand Response programs

# Outage Notification

- GIS Tool—Plotted Notifications
- Full outage list shown for sorting and prioritizing work

# Transformer Loading

- 📶 To Identify Potential Overload Failures
- 📶 Sum Hourly or Daily Load and Compare with Threshold
